### WarmSafe™ Technology

Enthermics by Pedigo warmers feature **WarmSafe™ Zone Heat,** **a** method for distributing a balance of heat throughout the cabinet, to assure accurate set-point temperatures.

Fluid warmers incorporate the use of a circulation fan to evenly distribute the warmed air to achieve and maintain accurate set-point temperatures. Pedigo fluid warmers have an accuracy of +0/-2°F for injection fluids and an accuracy of +0/-3°F for irrigation fluids.

## WarmSafe™ Technology

You do not need statistics or charts to tell you that patients respond well to warmed blankets and fluids. You have seen it first hand time and time again. With our patented **WarmSafe™** warming technologies, our uncompromising quality construction and our variety of sizes and features, we help you maintain that kind of positive patient response – the kind that helps reduce recovery time and ensures a comfortable stay.
Patented warming techonology distributes warmth evenly to fluids, through an electrothermal cable array in the two sides and bottom of the cabinet.

System monitors temperature in eash cabinet zone and provides heat when it is needed, where it is needed. Zone heating prevents overheating and discoloration of blankets.
